

Science — Semester-1

6 lesson(s) included, 0 missing

Included:

- Chapter:1 Human Body: Food We Eat
- Chapter:2 Human Body: The Teeth
- Chapter:3 Human Body: The Digestive and Excretory Systems
- Chapter:4 Plants in the Surroundings and Environment
- Chapter:5 Adaptation in Plants
- Chapter:6 Adaptation in Animals

Chapter 1 – Human Body: Food We Eat

Q1. Fill in the blanks

1. The essential substances required for the body nourishment is called _____.
2. The two types of carbohydrates are _____ and _____.
3. _____ is the nutrient that keep our body warm.
4. _____ is the nutrient that repairs worn-out tissue.
5. _____ food fight against diseases.
6. _____ is needed for formation of blood.
7. Citrus fruits are rich in _____.
8. We should drink _____ glasses of water daily.
9. _____ removes water from food to make it last long.
10. Food that has short shelf life is called _____ food.

Q2. Match the following

- | | | |
|-----------------------|---|-----------------------|
| 1. Body-building food | - | Refrigerator |
| 2. Vitamin-D | - | Body temperature |
| 3. Freezing | - | Fibrous part of food |
| 4. Water | - | Build muscles |
| 5. Roughage | - | Absorption of calcium |

Q3. State true or false. Correct the false statement.

1. Starch does not taste sweet.
2. Eating too much of fatty food can make us obese.
3. Roughage has lots of nutritive value.
4. 30% of human body is made up of water.
5. Calcium is needed for the formation of strong teeth and bones.
6. Iron improves eyesight.
7. Food is preserved in oil by pickling.
8. Pulses have a long shelf life.

Q4. Choose the odd one and group the other three options.

- | | | | |
|--------------|------------|-----------|-----------|
| 1. Vitamin A | Vitamin C | Vitamin Y | Vitamin D |
| 2. Proteins | Water | Vitamins | Minerals |
| 3. Rice | Oil | Butter | Ghee |
| 4. Salting | Nourishing | Canning | Boiling |

Q5. Answer the following questions.

1. Name the five main nutrients.
2. Differentiate carbohydrates and fats.
3. Differentiate Proteins and Vitamins.
4. What is the function of roughage?
5. Differentiate Vitamin A and Vitamin C.
6. Write any two functions of water.
7. Write any two ways to avoid food wastage.
8. Define a) canning b) Balanced diet c) Perishable food
9. How is food preserved by dehydrating?
10. Give reason.
 - a. It is very important to eat food.
 - b. Vitamins and minerals are called protective food.
 - c. We should not throw away food and waste it.
 - d. Proteins are important for children.

Q6. Think and Answer questions.

1. Simran fell down in the playground and fractured her arm bone. The doctor told that her bones were a bit weak. If you were Simran's friend, what kinds of food items would you advise her to eat to make her bones strong again? Name the mineral that helps with this.
2. Amit wants to try out for the school soccer team next month. He needs to build strong muscles and repair his body after heavy training sessions. Amit's current diet is mostly rice and potatoes. What major nutrient is missing from his diet that is absolutely necessary for muscle building, and what are two healthy foods he can eat to get it?

3. Rahul plays football every evening, but he feels very tired quickly. His mother gives him a glass of glucose water and a banana before he plays next time. Why did his mother choose these specific food items?
4. During a science class, Rohan learns that the human body cannot digest fibre at all. It passes out of the body almost exactly the way it went in. Rohan thinks, "If we can't digest it, it must be completely useless. So we need not eat fibre". How can you explain to Rohan that fibre is actually highly useful?
5. You have some leftover cooked rice after dinner. What will you do to prevent it from spoiling overnight?
6. Fisherman John catches a large amount of fish. He wants to sell some tomorrow, but he also wants to keep some to eat two months from now. What two different preservation methods should John use for his fish?
7. Rohit's grandmother made sweet apple jam and put it in a clean glass jar. She closed the lid tightly. Why did she close the lid tightly, and how is jam able to stay good for months without rotting?

Q7. Assertion and Reason questions.

For each question, choose one of these four responses:

- (a) Both A and R are true, and R is the correct explanation of A.
- (b) Both A and R are true, but R is not the correct explanation of A.
- (c) A is true, but R is false.
- (d) A is false, but R is true.

1. (A) Rice, potatoes and sugar are energy-giving.
(R) They are rich in carbohydrates for energy.
2. (A) Children need more protein-rich food.
(R) Proteins help in growth and repairing tissues.
3. (A) Eating too many oily foods is bad for health.
(R) Excessive fat consumption leads to obesity.
4. (A) Fruits and leafy vegetables are protective foods.
(R) They supply carbohydrates and fats.
5. (A) Roughage is essential as it adds bulk, helping remove waste.
(R) It provides no nutrients.

6. (A) We must drink 8-10 glasses of water daily.
(R) Water helps digest food and removes waste.
7. (A) A meal of only rice is a balanced diet.
(R) A balanced diet includes all essential nutrients in the right amount.
8. (A) Boiling and steaming kill germs.
(R) Oil is a perishable food.
9. (A) Salt and oil are used to preserve mangoes.
(R) They reduce the growth of germs.
10. (A) Foods are refrigerated to prevent spoiling.
(R) Low temperatures prevent germ growth.

Q8. Observe the picture and answer the questions

1. Identify and name the above picture.
2. Define it.
3. Which nutrient has to be eaten more?
4. Which nutrient has to be taken less?
5. Leela's mother is worried because she often falls ill. Which part of the food pyramid is she lacking?

I. Fill in the blanks.

- i. help us to chew the food properly.
- ii.are used for cutting and biting food.
- iii. Canines are used for.....the food.
- iv. Inside the enamel lies the
- v. The first sets of teeth are called as.....
- vi. is the hardest substance in the human body.
- vii. The.....has blood vessels and nerves in a tooth.
- viii.are black spots on the teeth.
- ix. is a sticky, yellow layer on the teeth.
- x. are bigger and flatter than premolars.

II. Name the following.

- i. A hole in the tooth, caused by bacteria.
- ii. Yellow sticky layer around the tooth.
- iii. It protects the tooth from wear and tear.
- iv. The visible part of the tooth.
- v. The second set of teeth.
- vi. The teeth used for chewing food.

III. Match the following.

- | | |
|---------------|-----------------------|
| i. Incisors | a. The Cracking Teeth |
| ii. Premolars | b. The Tearing Teeth |
| iii. Molars | c. The Cutting Teeth |
| iv. Canines | d. The Grinding Teeth |

IV. Write true or false. Correct the false statement.

- i. Brush your teeth twice a day.
- ii. Enamel is the soft central part of the tooth.
- iii. Wisdom teeth are found in premolars.
- iv. Molars are used to chew and grind food.
- v. Human babies are born with 3 teeth.
- vi. If we lose our permanent teeth, we cannot grow another new set.
- vii. The first set of teeth is called permanent teeth.

V. Choose the correct option.

- i. **Assertion (A):** Canines are used for grinding food.
Reason (R): Canines are pointed and sharp.
 - A. Both A and R are true, and R is the correct reason
 - B. Both A and R are true, but R is not the correct reason
 - C. A is true, but R is false
 - D. A is false, but R is true
- ii. **Assertion (A):** Eating too many sweets can harm our teeth.
Reason (R): Sugar helps bacteria produce acids that damage teeth.
 - A. Both A and R are true, and R is the correct reason
 - B. Both A and R are true, but R is not the correct reason
 - C. A is true, but R is false
 - D. A is false, but R is true
- iii. **Assertion (A):** Hard brushing makes teeth cleaner.
Reason (R): It can damage gums and enamel.
 - A. Both A and R are true, and R is the correct reason
 - B. Both A and R are true, but R is not the correct reason
 - C. A is true, but R is false
 - D. A is false, but R is true

VI. Answer the following questions.

- i. Enlist any two uses of teeth.
- ii. Name the different types of teeth.
- iii. How many set of teeth do we have? Name them.
- iv. How are cavities formed?
- v. Write any three tips to take care of our teeth.
- vi. What is the layer under the enamel of a tooth?
- vii. How are the premolars teeth used?
- viii. What is the main function of molar teeth?
- ix. How many molars are there in each jaw?

VII. Define the following.

- i. Plaque
- ii. Enamel
- iii. Wisdom teeth

VIII. Differentiate the following.

- i. Milk teeth and permanent teeth.
- ii. Incisors and canines.
- iii. Molars and premolars.

IX. Competency based questions.

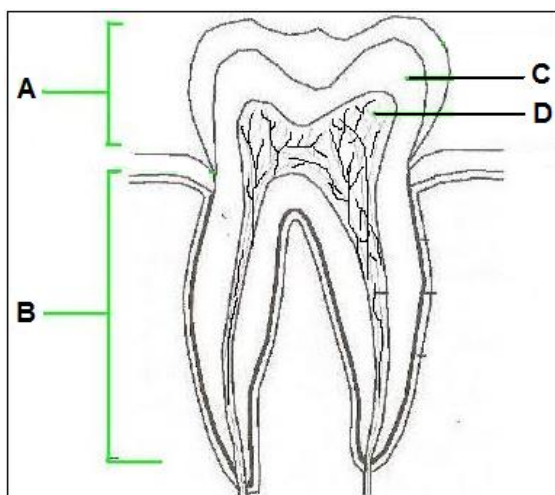

- i. Kavin eats chocolates daily and does not brush at night. What problem may he face? What should he do?
- ii. Arjun is a 7 year old boy.He lost one of his front teeth while playing. What type of teeth are these? Will they grow again?
- iii. Anu eats fruits, drinks milk, and brushes twice daily. Her friend eats junk food and skips brushing.
 - a) Whose teeth will be healthier? Why?
 - b) What lesson do you learn from this?

X. Complete the following table.

Types of Teeth	No. of Teeth	Shape	Function
Incisors			
		Sharp and pointed	
			Chewing food
	12 (6 in upper jaw and 6 in lower jaw)		

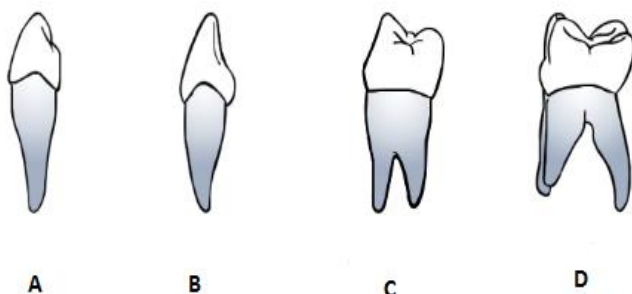

XI. Observe the pictures and answer the questions.

a.

- Label the parts [A],[B],[C],[D] in the picture.
- Describe the enamel of a tooth.
- Name the three main layers of a tooth.
- Explain the layers of a tooth.

b.

- Identify the teeth [A],[B],[C],[D].
- Write the function of [A] and [C].
- Write the function of [B] and [D].

The Vikasa School, Tuticorin

Class: IV Chapter-3 Human Body: The Digestive and

Subject: Science Excretory Systems

Question Bank

.....

I. Fill in the blanks:

1. The process of breaking down food into simple substances is called

.....

2. The helps us to chew food.

3. The tube that carries food from the mouth to the stomach is called the

.....

4. The produces bile juice that helps in digestion.

5. Most digestion takes place in the intestine.

6. The remove wastes from the blood.

7. The liquid waste produced by the kidneys is called

8. The urinary bladder stores before it is removed from the
body.

9. The undigested food is removed from the body through the

10. Drinking enough helps to keep our kidneys healthy.

II. Name the following:

1. The organ that produces bile juice.

2. The tube that carries food from the mouth to the stomach.

3. The organs that filter waste from the blood.

4. The liquid waste produced by the kidneys.
5. The organ where food is mixed with digestive juices.

III. Match the following:

- | | |
|--------------------|-------------------------------------|
| 1. Teeth | a. produces bile juice |
| 2. Liver | b. filters waste from blood |
| 3. Stomach | c. chews food |
| 4. Kidneys | d. mixes food with digestive juices |
| 5. Urinary bladder | e stores urine |

IV. State true or false. If false correct the statement:

1. The stomach is the first organ where digestion begins.
2. The small intestine absorbs nutrients from digested food.
3. The kidneys help in removing waste from the blood.
4. Urine is stored in the urinary bladder before leaving the body.
5. The liver produces saliva to digest food.

V. Choose the correct option:

1. Assertion (A): The small intestine absorbs nutrients from digested food.
Reason (R): The small intestine has tiny finger-like projections that help absorb nutrients.
 - a) Both A and R are true and R is the correct explanation of A.
 - b) Both A and R are true but R is not the correct explanation of A.
 - c) A is true but R is false.
 - d) A is false but R is true.

2. Assertion (A): Kidneys are part of the excretory system.

Reason (R): Kidneys help in filtering waste materials from the blood.

- a) Both A and R are true and R is the correct explanation of A.
- b) Both A and R are true but R is not the correct explanation of A.
- c) A is true but R is false.
- d) A is false but R is true.

3. Assertion (A): The liver stores urine.

Reason (R): The urinary bladder stores urine before it is removed from the body.

- a) Both A and R are true and R is the correct explanation of A.
- b) Both A and R are false.
- c) A is false but R is true.
- d) A is true but R is false.

VI. Answer the following:

1. Name the two organs that provide digestive juices to the small intestine.
2. What is the function of the small intestine?
3. Name the main organs of the excretory system.
4. How do kidneys help our body?
5. Why should we drink plenty of water?
6. What happens to undigested food in our body?
7. What is the function of the stomach?
8. What is bile juice and where is it produced?
9. Differentiate between digestion and excretion.
10. Differentiate between small intestine and large intestine.

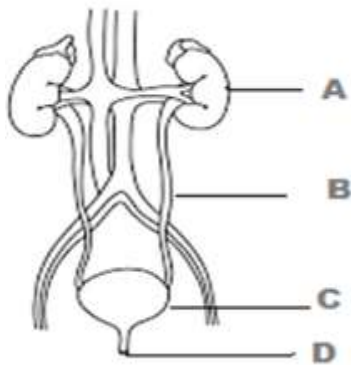

VII. Define the following:

1. Digestion
2. Excretion
3. Urine

VIII. Competency based questions:

1. Ravi ate a sandwich quickly without chewing it properly. What advice will you give him and why?
2. A person drinks very little water every day. How may this affect his excretory system?
3. A doctor says that a patient's kidneys are not working well. Which body function may be affected and why?

IX. Observe the picture and answer the questions:

1. Name the system shown in the picture.
2. What is the function of the urethra?
3. Which organ stores urine before it is released from the body?
4. Label the parts A, B, C, D.
5. How many kidneys does a human body have?

The Vikasa School, Tuticorin

Class:IV

Question Bank

Subject: Science

Ch:4 Plants in the Surroundings and Environment

I. Fill in the blanks.

1. _____ is the main root and many fine roots.
2. _____ roots do not move deep into the ground.
3. Roots absorb _____ and _____ from the soil for the plant to prepare its food.
4. Trees have a thick, woody stem called a _____
5. Pumpkin have _____ stem.
6. The leaf has a broad and flat part called the _____
7. A green substance in the leaf is called _____
8. Leave have tiny pores called the _____ to exchange gases.

II. Match the following.

- | | |
|--------------------------|--------------------|
| 1. Taproot | a. Watermelon |
| 2. The great banyan tree | b. Attract Insects |
| 3. Fruits | c. Main vein |
| 4. Flowers | d. Thick roots |
| 5. Midrib | e. Kolkata |

III. Write true or false. If false, correct the statement.

1. Most flowers change into fruits.
2. Leaves prepare food for the plant.
3. Taproot consists of many thins roots that grow below the stem.
4. Mangoes have many seeds inside them.
5. Chlorophyll helps the plant to breathe
6. Flowers are brightly coloured and have pleasant smell.
7. Fruits are the fleshy part of the plant.

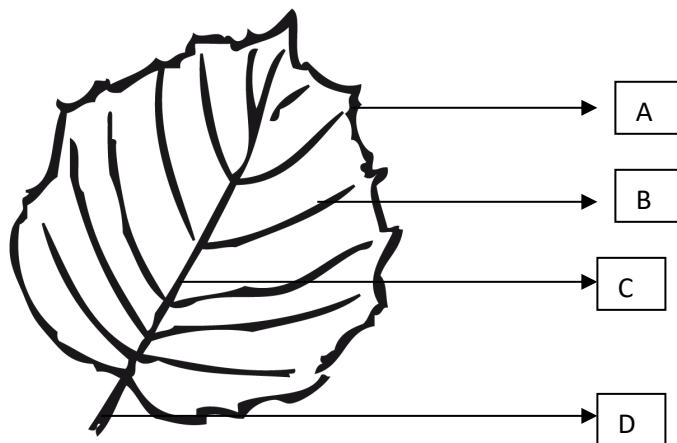

IV. Answer the following questions.

1. Name the two kinds of roots.
2. What are the functions of a root?
3. Differentiate taproot and fibrous root.
4. Describe the root and the shoot.
5. How will you take care of plants?

6. What are the main functions of leaves?
7. What is called photosynthesis ?
8. Why do leaves contain chlorophyll?
9. Draw a leaf and label its parts.
10. Explain the parts of a leaf.
11. What are called leaf blade?
12. What is midrib?
13. Define stomata.
14. List out some uses of plants.

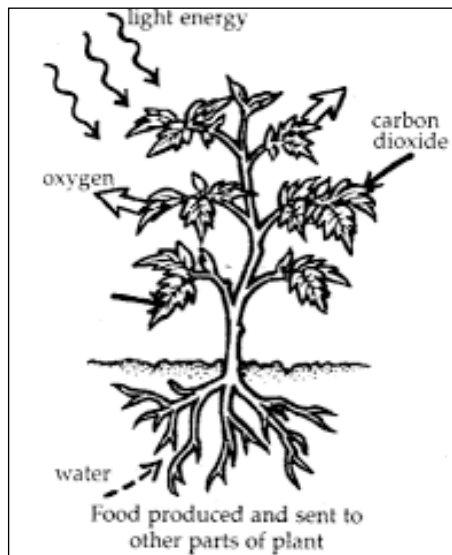

V. Picture based question.

1. Observe the picture and answer the question.

- a. Label all the parts (A),(B),(C),(D)
- b. Write a short note on part (C)
- c. What is called photosynthesis?
- d. Write any two functions of leaves.

2. Observe the picture and answer the question.

- Identify the above picture.
- In the above picture, what does the arrow mark represent?
- Why do the leaves of plants are green?

The Vikasa School, Tuticorin
Class:IV
Question Bank
Subject:Science
Ch: 5 Adaptation in Plants

I. Choose the correct answer.

- i. Banyan is a.....tree.
a. Deciduous b. Evergreen c. Coniferous
- ii.areas are hot, dry and receive very little rainfall.
a. Desert b. hilly c. Marshy
- iii. Which of the following is a coastal plant?
a. Rubber b. Mangroves c. Coconut
- iv. Which cannot be grown in plains?
a. Mango b. teak c. hydrilla
- v. trees shed their leaves in winter to protect themselves from cold.
a. Deciduous b. Evergreen c. Coniferous
- vi. Cuscuta is a plant.
a. Coastal b. Aquatic c. Parasitic
- vii. trees bears needle like leaves with waxy coating.
a. Pine b. Apple c. mango
- viii.plants float freely on water.
a. Floating b. Fixed c. Underwater
- ix.are fixed plants.
a. Water lily b. Hydrilla c. Pondweed
- x.plants capture and eat insects.
a. Carnivorous b. Parasitic c. Submerged

II. Fill in the blanks

- i. The special features or the changes that allow plants to live and survive in its habitat are called.....
- ii. Plants that grow on land are called plants.
- iii. Plants that grow on water are called plants.

- iv. The roots of mangroves are called
- v.trees do not shed their leaves at all and remain green throughout the year.
- vi. Trees in areas are conical shape.
- vii. trees shed their leaves in winter to protect themselves from cold.
- viii. Pond weed is an example of.....plants.
- ix. Rafflesia is an example of.....plants.
- x. Plants that obtain nutrients from other plants are called.....
- xi. Cactus is an example of.....plant.
- xii.plants grow under the surface of water.

III. Match the following

- | | |
|------------------|--------------------------|
| i. Lotus | Floating plant |
| ii. Pondweed | Fixed plant |
| iii. Wolffia | Carnivorous plant |
| iv. Coconut | Underwater plant |
| v. Venus flytrap | Coastal tree |
| | |
| i. Cuscuta | Desert Plant |
| ii. Fir | Deciduous tree |
| iii. Banyan | Parasitic plant |
| iv. Babool | Grow in marshy areas |
| v. Mangroves | Plants grow in mountains |

IV. Name the following

- i. Plants that grow in land.
- ii. Plants that grow in water.
- iii. Plants that eat insects.
- iv. Trees having breathing roots.
- v. Two examples of underwater plants.

- vi. Two examples of coastal plants.
- vii. Two examples of trees that grow in mountains.
- viii. Two examples of trees that grow in plains.
- ix. Plants that depend on other plants for their food.
- x. A Plant that has a strong and flexible trunk.

V. Write true or false

- i. Plants found in mountains produce cones with seeds for reproduction.
- ii. In marshy areas, the soil is wet and clayey.
- iii. Vallisneria is an example of floating plants.
- iv. Fir is a desert plant.
- v. Pondweed is a fixed plant.
- vi. Fixed plants have leaves covered with waxy coating.
- vii. Pitcher plant absorbs the carbon-dioxide by eating insects.
- viii. Floating plants are heavy and hard.

VI. Answer the following.

- i. Define adaptations.
- ii. Define habitat.
- iii. Name the three types of aquatic plants.
- iv. Describe the adaptations of plants in deserts.
- v. Describe the adaptations of plants in coastal areas.
- vi. Describe the adaptations of plants in mountain areas.
- vii. Describe the adaptations of plants in marshy areas.
- viii. Describe the adaptations of plants in plains.

VII. Differentiate:

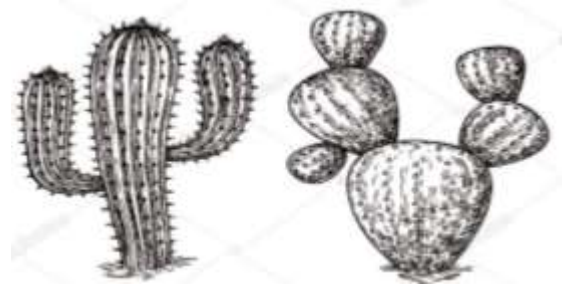

- i. Deciduous and evergreen trees.
- ii. Insectivorous and parasitic plants.
- iii. Terrestrial and aquatic plants.
- iv. Floating plants, underwater plants and fixed plants.

VIII. Picture based question

Observe the pictures and answer the following questions.

i)

- Name the above plant and its habitat.
- How are the stems of these plants adapted?

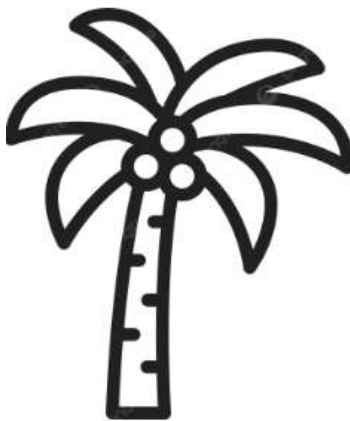

ii)

- Name the plant.
- Why do they trap insects?
- Name any other insectivorous plants.

iii)

(A)

(B)

- Name the above plants (A) and (B) and their habitat.
- Describe the adaptations seen in the above trees to survive in their habitat.

IX. Reason and Assertion questions.

- A. Both Assertion and Reason are true, and Reason correctly explains Assertion.
- B. Both Assertion and Reason are true, but Reason does not correctly explain Assertion.
- C. Assertion is true, but Reason is false.
- D. Assertion is false, but Reason is true.
 - i. **Assertion:** Cactus plants have spines instead of broad leaves.
Reason: Spines help reduce the loss of water.
 - ii. **Assertion:** Lotus is a desert plant.
Reason: Lotus grows well in water.
 - iii. **Assertion:** Lotus leaves have a waxy surface.
Reason: Lotus has broad leaves.
 - iv. **Assertion:** Desert plants usually have broad, thin leaves.
Reason: Broad leaves help desert plants lose more water.
 - v. **Assertion:** Mangrove plants can grow in muddy, waterlogged soil.
Reason: Their special roots help them obtain oxygen.
 - vi. **Assertion:** Spines of a cactus are modified leaves.
Reason: They help protect the plant from animals.
 - vii. **Assertion:** A cactus can survive for a long time without frequent watering.
Reason: Its thick stem stores water.

X. Application Based Questions.

- i. Anu planted two plants. Plant A needed frequent watering, while Plant B survived with very little water. Plant B had a thick, fleshy stem and small spines.
 - a) Which plant is likely to be a desert plant?
 - b) What does its thick stem help it do?
 - c) Why does it have spines instead of large leaves?

- ii. During a trip to a mountain area, Rahul noticed a small plant with leaves that looked like little cups. He was surprised when he saw an insect trapped inside one of the leaves. His teacher explained that the plant was an insectivorous plant.
- a) Why does this plant trap insects?
 - b) How does trapping insects help the plant survive?
 - c) In which type of soil do insectivorous plants commonly grow?
- iii. During a visit to a coastal village, Ananya noticed many coconut trees growing near the seashore. She observed that the trees had long, strong roots and tall, flexible trunks. Her teacher explained that these features help the trees survive in the coastal environment.
- a) What kind of habitat do coconut trees grow in?
 - b) How do strong roots help coconut trees?
 - c) Why is a flexible trunk useful for a coconut tree growing near the sea?

Q1. Choose the correct answer

1. A _____ is where animals find food, shelter and comfortable weather.
a. house b. hill c. habitat d. herbivore
2. _____ could survive the extreme cold.
a. Lion b. Rabbit c. Camel d. Yak
3. Inside water, most amphibians breathe through their _____.
a. nose b. lungs c. moist skin d. stomata
4. _____ have a streamlined body.
a. Fishes b. Mammals c. Insects d. Trees
5. Turtles and snails withdraw themselves into their _____.
a. scales b. spines c. shells d. wings

Q2. Match the following

- | | | |
|---------------|---|-----------------|
| 1. Scorpions | - | Webbed feet |
| 2. Eagle | - | Poisonous sting |
| 3. Polar bear | - | Blowhole |
| 4. Whale | - | Talons |
| 5. Toad | - | Furs |

Q3. Fill in the blanks.

1. _____ animals spend most of their time on the tree branches.
2. The thick layer of fat under the skin is called _____.
3. Ducks have _____ to swim in water.
4. Monkeys use their _____ to balance and grip the branches.
5. _____ have been used for transportation in deserts.
6. The grinding teeth of animals is called _____.
7. The cutting teeth of animals is called _____.
8. The tearing teeth of animals is called _____.
9. Animals that hunt other animals are called _____.
10. _____ animals are kept in homes for companionship.

Q4. State true or false. Correct the statement, if it is false.

1. Desert animals remain underground during the day.
2. While flying, birds change their direction with the help of their hollow bones.
3. Omnivores eat the flesh of dead animals.
4. Snakes swallow their prey as a whole.
5. Food chain maintains a balance between plants and animals.

Q5. Name the following.

1. Animals tamed for doing work for us.
2. Animals that the predators hunt.
3. Animals that live in water.
4. Animals that hunt and eat flesh.
5. Animals that secrete milk to feed their young ones.

Q6. Choose the odd one and group the other three options.

- | | | | |
|-------------|-------------|------------|-----------|
| 1. Camel | Rattlesnake | Arctic fox | Jerboa |
| 2. Turtles | Salamander | Fish | Crabs |
| 3. Squirrel | Birds | Bat | Butterfly |
| 4. Cow | Bear | Buffalo | Goat |
| 5. Horse | Sheep | Hen | Parrot |

Q7. Give any two examples.

- | | | |
|------------------------|------------------------|------------------------|
| 1. Terrestrial animals | 6. Aquatic mammals | 11. Omnivores |
| 2. Aquatic animals | 7. Desert animals | 12. Scavengers |
| 3. Amphibians | 8. Cold region animals | 13. Predator birds |
| 4. Arboreal animals | 9. Herbivores | 14. Camouflage animals |
| 5. Aerial animals | 10. Carnivores | 15. Domestic animals |

Q8. Answer the following questions.

1. Define the term habitat.
2. What is meant by nocturnal animals?
3. Mention the common adaptive features of desert animals.
4. List out the unique adaptations of a camel.
5. Define hibernation.
6. What are appendages? What is its use?

7. How are fishes adapted to live in water?
8. What are the adaptations of a frog?
9. How is monkey adapted to live on trees?
10. Mention the common adaptations of a bird.
11. How are the teeth of Cow, Lion and Bear adapted to eat food?
12. What is camouflage?
13. Describe the adaptations of any two animals for protection.
14. What is food chain? Why is it important?
15. Mention few ways to take care of animals.
16. A scientist compares an Arctic fox (which has tiny ears) with a Fennec fox living in the hot Sahara Desert (which has massive ears). Why does the desert fox need such large ears?
17. While cleaning a fish tank, Amit accidentally drops a goldfish onto the room floor. Even though there is plenty of air in the room, the fish begins to suffocate. Explain why a fish cannot breathe on land, naming the specific organ involved.
18. A hawk is flying over a garden looking for a green chameleon. The chameleon quickly crawls onto a bright green leaf and stops moving. The hawk flies away without noticing it. What is this survival trick called, and how does it protect the chameleon?
19. Differentiate the following.
 - a. Desert animals and cold region animals
 - b. Aquatic animals and Amphibians
 - c. Arboreal animals and Aerial animals
 - d. Carnivores and Herbivores
20. Give reason.
 - a. Desert snakes have scaly skin.
 - b. Camels have padded feet and thick skin.
 - c. Penguins have thick skin and blubber.
 - d. Frogs and Toads have moist skin and webbed feet.

Q9. Assertion and Reason questions.

For each question, choose one of these four responses:

- (a) Both A and R are true, and R is the correct explanation of A.
- (b) Both A and R are true, but R is not the correct explanation of A.
- (c) A is true, but R is false.
- (d) A is false, but R is true.

1. Assertion (A): Camels have long eyelashes and nostrils that can close completely.

Reason (R): These features protect the camel from the blowing desert sand.

2. Assertion (A): Frogs have webbed feet on their hind legs.

Reason (R): Polar bears have a thick layer of fat (blubber) under their skin.

3. Assertion (A): Some animals go into a deep, long sleep during the harsh winter months.

Reason (R): This deep winter sleep is known as aestivation.

4. Assertion (A): Whales and dolphins must regularly come up to the surface of the ocean.

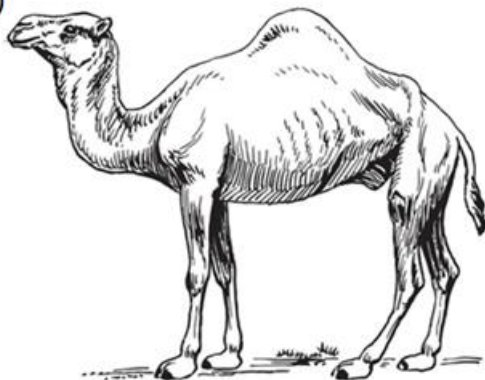

Reason (R): Whales and dolphins are aquatic animals that use gills to take in dissolved oxygen from water.

5. Assertion (A): Cows and goats have incisors and molars but lack sharp canines.

Reason (R): Herbivores need to bite and chew tough plant fibers rather than tear flesh.

Q10. Observe the picture and answer the questions

1)

- 1. Identify the animal.
- 2. Describe its habitat.
- 3. Mention any two adaptations to live in its habitat.
- 4. The above animal is used for transportation by humans. Give reason.

2)

A

B

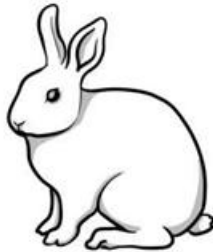

C

1. Identify the animals **A, B, C**.
 2. Describe their habitat.
 3. Animals that live in cold regions are usually white. Give reason.
-

3)

A

B

C

D

1. Identify the animals **A, B, C, D**.
